1 · INVESTMENT CASE

FAIR VALUE VS PRICE

The Gordon model gives USD 160.10, against a price of USD 141.34. At a cost of equity of 7.20%, the price implies only 2.5% growth forever, below the 3.1% organic revenue growth of Q3 [1]. The market has priced the cut in 2026 EPS guidance [1], not the cost programme agreed with Elliott, which targets at least 1 point of margin by 2028 [2].

MARGIN OF SAFETY AND ALPHA

Margin of safety +13.3%, alpha +14.2% a year (IR 0.93), assuming the gap closes within one year.

CATALYST

Update on the North America supply chain and go-to-market · `Late 2026 (company)`. Promised to analysts and investors for late 2026 in the agreement with Elliott [2]; no date set yet. Figures on an integrated food and drinks network and its savings would make the margin target concrete.

New structural cost actions · `Coming months (company)`. Announced with Q3: actions are being identified and will be implemented in the coming months [1]. Savings that fund price investment and volume would lift the earnings path the market discounts.

DECISION

Long candidate. We buy, although the margin of +13% is below our 25% rule: the comparables (USD 167.55) are above the price too. A defensive stock with dated news from management inside the challenge.

2 · VALUATION: DIVIDEND DISCOUNT MODEL

WHY THIS METHOD

PepsiCo is mature and pays out most of its earnings: USD 8.9bn of cash returns planned for 2026, of which USD 7.9bn in dividends [1]. Bloomberg's long-term growth of 3.4% is close to the long-run rate, so one stage is enough: the Gordon model with growth of 3.0%.

METHODS THAT DO NOT FIT

Two stages add little when g1 is this close to g2. P/B (8.65x) says little: the brands were built in-house and are not on the balance sheet, and leverage shrinks the equity. Coca-Cola sold its bottlers and has other margins, so the comparables are only a double check.

4 · VALUE-TRAP CHECK

CHARACTERISTIC	METRIC	FY25	PEER MEDIAN	OWN PAST AVG.	VS PEERS	TREND	
Profitability	ROE	40.4%	8.8%	51.4%	better	worsening	
Profitability	ROA	7.7%	3.6%	9.4%	better	worsening	
Profitability	FCF margin	8.2%	10.0%	7.7%	worse	improving	
Growth	Revenue growth	2.3%	3.8%	3.1%	worse	worsening	**Red flag**
Growth	Gross margin	54.1%	43.9%	53.9%	better	improving	
Safety	Debt / equity	2.45	0.84	2.40	worse	worsening	**Red flag**
Payout	Payout / FCF	1.13	0.98	1.16	worse	improving	

Earnings test: adjusted EPS 8.14 (FY25) → 8.42 → 8.64 (forward): rising. Trailing GAAP EPS of 7.95 is close to the adjusted figure.

WATCH **Red flags or falling earnings, not both: watch, not a trap.** Watch: revenue grows slower than peers and debt is 2.4 times equity. Earnings are not falling: core EPS rose 2% in Q3 [1]. Dividends and buybacks exceeded FCF in FY25, so part of the payout is borrowed. **The business is sound; the payout is the point to watch.**

5 · ALPHA

ASSUMPTION	FORMULA	α, annual	IR
Gap closes in 1 year	α closed = $(1 + k)(V_0 - P_0) / P_0$	+14.2%	0.93
Gap never closes	α never = $D_1 / P_0 + g - k$	+0.6%	0.04
Used: closes in 1 year	**Goes into Treynor-Black**	**+14.2%**	**0.93**

Two company events are due before the end of the year [1][2], so we assume the gap closes within a year (α closed). Analysts' target is near the price, so this alpha is an upper bound. IR 0.93, against 0.64 for Buffett.

6 · SPECIFIC ISSUES

MAIN RISK: LEVERAGE AND THE PAYOUT

With dividends and buybacks at 1.13 times FCF and high debt, a further profit cut would put pressure on buybacks first. North American drinks volume fell 3% in Q3 [1]. If the cost plan slips, the market may keep pricing growth near 2.5%.

UPSIDE: AN ACTIVIST AND MANAGEMENT QUALITY

Elliott took a stake of about USD 4bn in 2025 [3]. The agreement brought a supply-chain review, nearly 20% fewer US products and board refreshment [2]. CEO Ramon Laguarta must now deliver the margin target, under activist scrutiny.

Model flags: *IR of 0.93 is above Buffett's 0.64: the alpha is probably too optimistic.*
